TechVal AI — Scientific Technology Assessment & Economic Valuation Report

Status: EXPERT APPROVED — REVISION VERIFIED | **Technology Code:** ITENAS-PAT-2026-001 | **Revision:** #1

SYNTHETIC DEMONSTRATION RECORD — FOR SYSTEM VERIFICATION ONLY (NO ACCURACY CLAIMS)

Technology Title: Modular Photocatalytic Membrane Reactor for Industrial Textile Wastewater Reclamation

Domain: Environmental & Chemical Process Engineering | **IP Status:** granted

1. Executive Summary & Four Independent Outputs

SCIENTIFIC SEPARATION PRINCIPLE: Technology assessment, commercialization readiness, economic valuation, and evidence completeness are maintained as four strictly separate outputs. Assessment and TRL scores are never converted into monetary values or financial discount/tax parameters.

Output 1 — Technology Assessment (Normalized 0–1 & Native TRL 1–9)	65.0% (0–1: 0.6500) | TRL 6 / 9 (Native NASA Scale)
Output 2 — Commercialization Readiness (Normalized 0–1)	65.0% (0–1: 0.6500)
Output 3 — Economic Valuation Indication (IDR)	Rp 666.060.121 (DCF Base Scenario (IDR))
Output 4 — Weighted Evidence Completeness	100.0% (Observed: 10, Missing: 0, N/A: 0)

Provisional Status Notice: Aggregate assessment is labeled PROVISIONAL (Provisional equal weighting set is active.)

6. Methodological Conventions, Limitations & Scientific References

• Normalization Formula: 1–5 rubrics normalized via (score - 1) / 4; TRL retained on native 1–9 scale.
• AHP Convention: Consistency Ratio CR <= 0.10 enforced as a methodological convention (Saaty, 1980).
• Patent Indicators: Forward citations and family size treated strictly as contextual signals (Harhoff et al., 2003).
• Valuation Separation: Different valuation approaches (DCF, Cost, Comparables, Royalty) are presented separately and never averaged automatically.
